

Subject: SentinelOS — Capability Briefing & Next Steps

To: Kent Hibben [kent.hibben@example.com \(mailto:kent.hibben@example.com\)](mailto:kent.hibben@example.com)

Cc: sentinel-team@example.com

Kent,

Attached are two short capability narratives prepared for DOE/PMA outreach:

- [DOE Narrative — Office of Nuclear \(artifacts/DOE-narrative-Office-of-Nuclear.pdf\)](#)
- [PMA Narrative — Hydroelectric \(artifacts/PMA-hydroelectric-narrative.pdf\)](#)

Executive summary:

SentinelOS addressed a Cloudflare Workers build failure caused by a stale main entry in wrangler.jsonc that referenced a legacy Astro output path. PR #42 updated the worker endpoint to the Astro Cloudflare adapter endpoint and explicitly bound the SESSION KV namespace ID to prevent accidental collisions. The PR was merged after repository protection was temporarily relaxed by the repository owner and has been merged into main.

Key evidence included in this packet:

- The two capability PDFs (attached).
- Merge audit: docs/executive-desk/evidence/merge-42-audit.md (contains merge SHA and steps performed).
- Local smoke-test results: 83 passing, 3 pending (see npm test output attached internally).

Requested next steps:

1. Review the attached capability narratives. If you'd like, we can produce a 1-page executive memo or a short slide that summarizes operational impacts and recommended next steps.
2. If the narratives and technical changes are acceptable, I recommend scheduling a brief review call to align on outreach timing and any necessary approvals.

Links & references:

- PR (merged): <https://github.com/Codynunn42/nunncorporation.com/pull/42>
- Local repo: SentinelOS-NON-DEMO

Regards,

Sentinel Management Automation
